(a) RocksDB range compaction

Client sequence: 128 in both views

Projected order: persist 22, publish the new view, then unlink 9, 11, 13

(b) SQLite-backed WAL merge: same handoff, no reply

Cleaner keeps	Exit before commit	Exit after commit
Before layout only	Both objects intact	1 segment missing
After layout only	2 segments missing	Both objects intact
Both layouts	Both objects intact	Both objects intact

SQLite integrity check: OK in all six outcomes
